

VALIDATE RSA ID NUMBERS

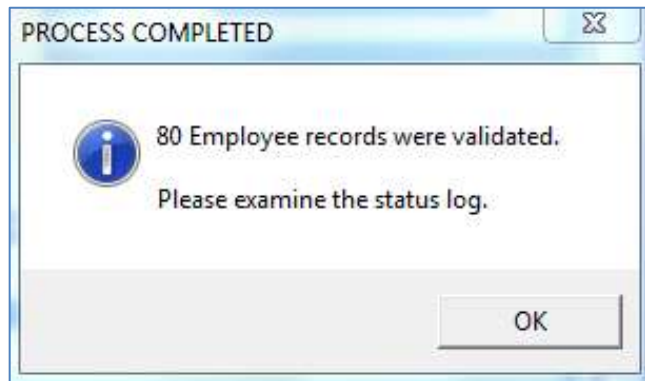

This feature allows the user to validate the Date Of Birth, Gender, Nationality and ID Number

Go to

By default the system has all fields checked for validation, but if the user needs to validate only one these fields they can uncheck the others and keep only the one they need to validate.

Click on Proceed. You will be notified that the records were validated.
Click on OK

The Status Log will then appear with the results of your validations.
